

# Practices of -omics techniques in swine production improvement and probiotics development.

Presented by: Dr. Xiaofan Wang  
October 22<sup>th</sup> 2021

# Content

Introduction of multi-omics and their applications in gut microbiome study

Swine probiotics: market size and economic potential

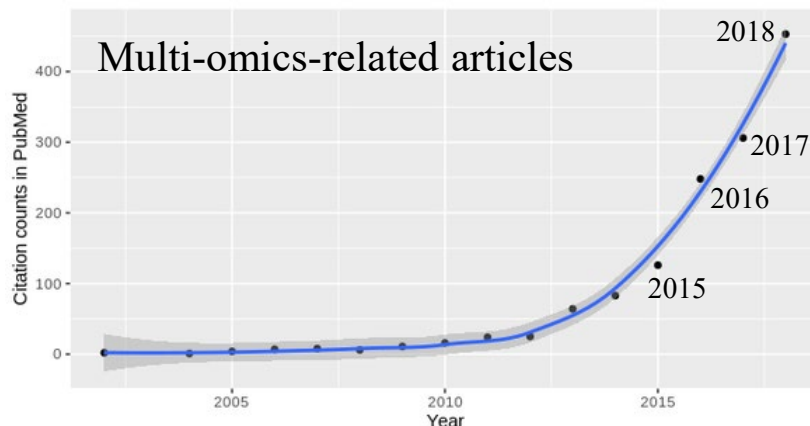

Characterization of longitudinal swine gut microbiome using culture dependent and independent approaches

Probiotics identification, isolation, and validation using multi-omics methods

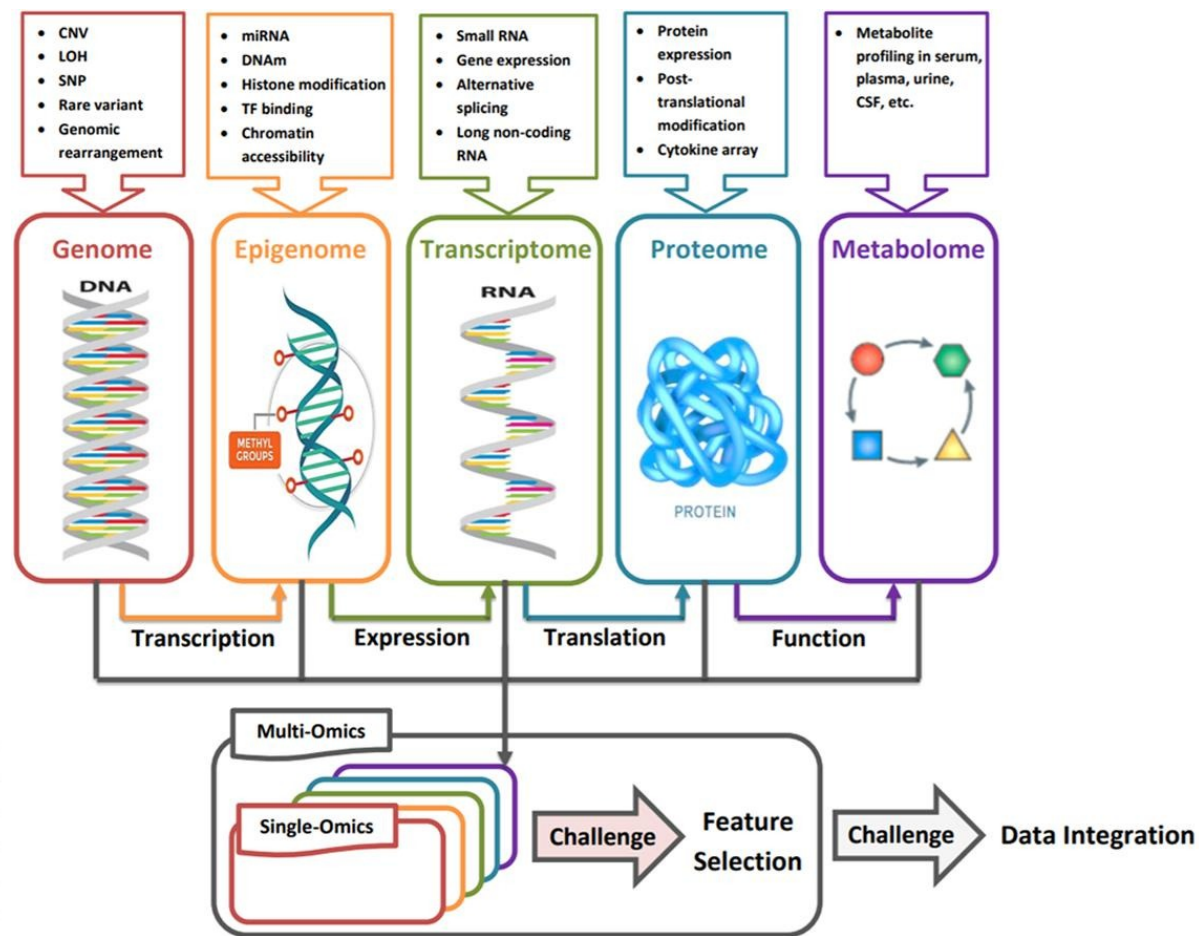

# Multi-omics and their applications in gut microbiome study

- a high-throughput sequencing based biological analysis approach consisting of microbiomics (16s rRNA, ITS, **culturomics**, and metagenomics), genomics, transcriptomics, epigenomics, proteomics, metabolomics, and pathomics etc.
- quantitatively track changes in **biological processes** in unprecedented detail (Ali Ebrahim et al., 2016)
- disclose **relationships** between biological entities and identify **biomarkers** characterizing biological systems.
- rapid growth in size and complexity of multi-omics data sets indicated the advent of **big-data era** in biological and medical fields

[https://en.wikipedia.org/wiki/Multiomics#List\\_of\\_softwares\\_for\\_multi-omic\\_analysis](https://en.wikipedia.org/wiki/Multiomics#List_of_softwares_for_multi-omic_analysis)

(Momeni et al., 2020)

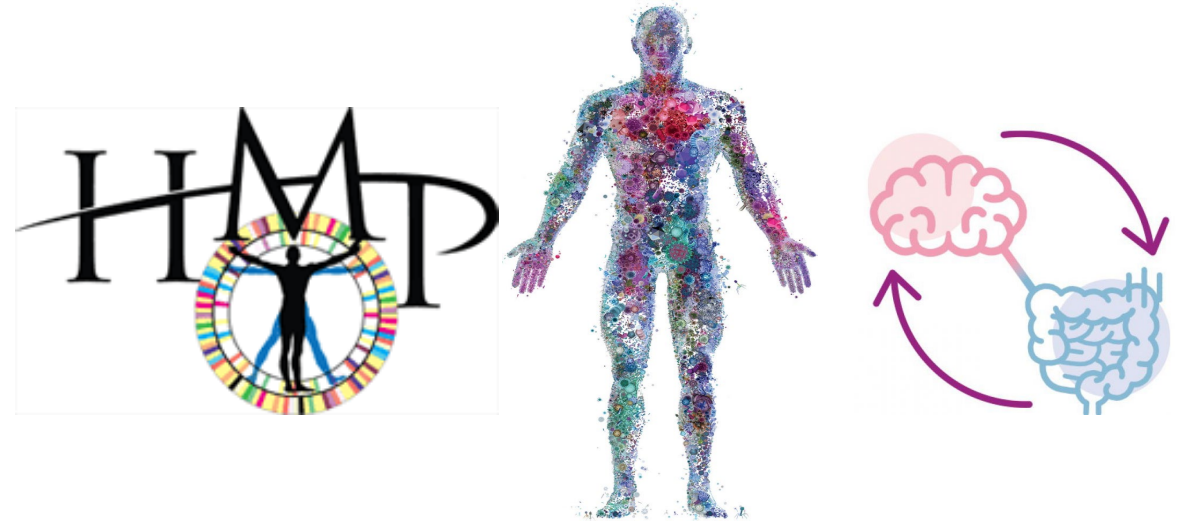

# Multi-omics and their applications in gut microbiome study

## ❖ Applications

- Human Microbiome Project
  - Phase 2: integration of multi-omic data from host/**microbiome** to human disease
  - Gut/nasal **microbiome** and type 2 diabetes
  - Gut **microbiomes** and inflammatory bowel disease
  - Vaginal **microbiomes** and pre-term birth
  - Brain-gut axis
- Systems Immunology
  - collect omics data that related to **immune** response to infectious diseases such as pediatric chikungunya
  - effectiveness and side effects of vaccines (transcriptome and plasma metabolomics)
- Cancer
  - multi-omics data repositories (Subramanian et al., 2020)
- Precision medicine

DATA REPOSITORY	WEB LINK	DISEASE	TYPES OF MULTI-OMICS DATA AVAILABLE
The Cancer Genome Atlas (TCGA)	<a href="https://cancergenome.nih.gov/">https://cancergenome.nih.gov/</a>	Cancer	RNA-Seq, DNA-Seq, miRNA-Seq, SNV, CNV, DNA methylation, and RPPA
Clinical Proteomic Tumor Analysis Consortium (CPTAC)	<a href="https://cptac-data-portal.georgetown.edu/cptacPublic/">https://cptac-data-portal.georgetown.edu/cptacPublic/</a>	Cancer	Proteomics data corresponding to TCGA cohorts
International Cancer Genomics Consortium (ICGC)	<a href="https://icgc.org/">https://icgc.org/</a>	Cancer	Whole genome sequencing, genomic variations data (somatic and germline mutation)
Cancer Cell Line Encyclopedia (CCLE)	<a href="https://portals.broadinstitute.org/ccle">https://portals.broadinstitute.org/ccle</a>	Cancer cell line	Gene expression, copy number, and sequencing data; pharmacological profiles of 24 anticancer drugs
Molecular Taxonomy of Breast Cancer International Consortium (METABRIC)	<a href="http://molonc.bccrc.ca/aparicio-lab/research/metabric/">http://molonc.bccrc.ca/aparicio-lab/research/metabric/</a>	Breast cancer	Clinical traits, gene expression, SNP, and CNV
TARGET	<a href="https://ocg.cancer.gov/programs/target">https://ocg.cancer.gov/programs/target</a>	Pediatric cancers	Gene expression, miRNA expression, copy number, and sequencing data
Omics Discovery Index	<a href="https://www.omicsdi.org">https://www.omicsdi.org</a>	Consolidated data sets from 11 repositories in a uniform framework	Genomics, transcriptomics, proteomics, and metabolomics

# Multi-omics and their applications in gut microbiome study

## ❖ Technologies and data analysis methods

<https://www.pratik.info/research/harvard/novel-multiomics-technologies-to-decipher-molecular-signatures-of-infectious-diseases>

## ❖ A community-maintained list of software packages for multi-omics data analysis.

Website: <https://github.com/mikelove/awesome-multi-omics>

- Multi-omics correlation or factor analysis
- Ecology multi-table literature
- Chemometrics multi-table literature
- Behavioral research multi-table literature
- Multi-omics clustering / classification / prediction
- Multi-omics networks
- Single cell multi-omics
- Multi-study correlation or factor analysis
- Multi-omics reviews / evaluations
- Multi-omics application papers
- Multi-omics data management

## Multi-omics networks

- 2018 - [MoTi-DREAM](#) - Didier - identifying communities from multiplex networks, and annotated the obtained clusters [article](#)
- 2019 - [RWR-MH](#) - Valdeolivas - Random walk with restart on multiplex and heterogeneous biological networks [article](#)

# Animal probiotics and future market size

## Probiotics

Live microorganisms that confer a health benefit on the host when administered in adequate amounts.

## Prebiotics

Substrates that are selectively utilized by host microorganisms, conferring a health benefit.

## Synbiotics

Combination of both probiotics and prebiotics

## Postbiotics

Compounds produced by microorganisms, released from food components or microbial constituents, including non-viable cells that when administered in adequate amounts, promote health and well-being.

Companion animals

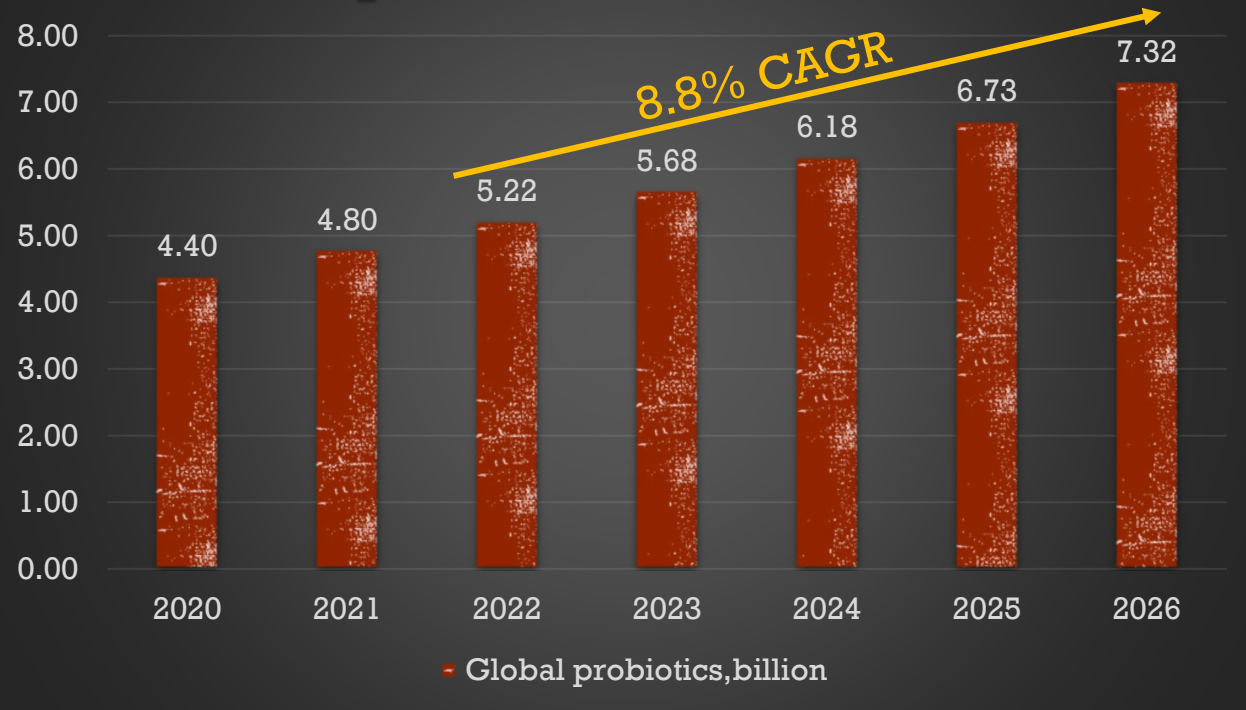

Livestock

# Animal probiotics and future market size

## Global probiotics in animal feed

<https://www.prnewswire.com/news-releases/probiotics-in-animal-feed-market-worth-7-3-billion-by-2026--exclusive-report-by-marketsandmarkets-301354278.html>

- The China Ministry of Agriculture and Rural Affairs released the ban of antibiotics use in animal feed from 2020.
- The Asia Pacific is projected to account for the largest market size during the forecast period.

## Asia Pacific Probiotics in Animal Feed Market (US\$ Bn), 2018

## Global Probiotics Animal Feed Market, By Region, 2019-2027 (US\$ "Mn")

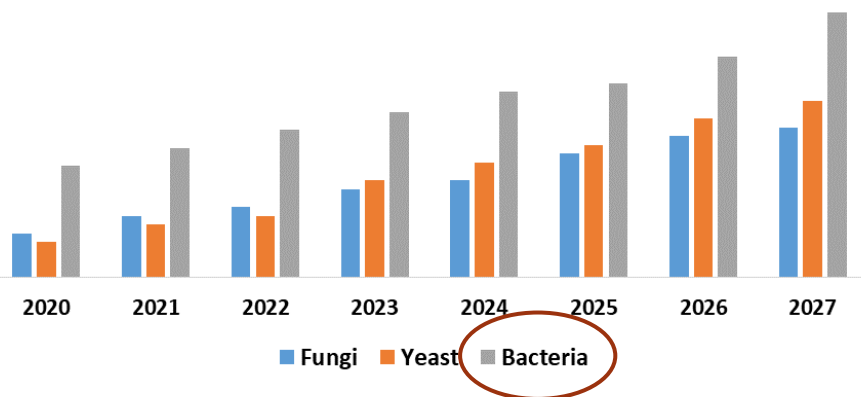

# Swine probiotics

Global Animal Feed Probiotics Market, by Installation type (%) in 2020

Global Animal Feed Probiotics Market, by Type 2020-2027 (USD Million)

❖ Three traditional swine probiotics: *Lactobacillus*, *bacillus*, and yeast

❖ **Benefits:**

- ❖ improve gut homeostasis, alleviate stress, and preventing diarrhea
- ❖ Immune protective and pathogen prevention
- ❖ Improve feed efficiency and meat production

❖ **Drawbacks:**

- ❖ Inconsistent or poor growth promoting performance
- ❖ Limited probiotics options (GRAS list)
- ❖ Un- or inadequately characterized biological functions and delivery mechanism

BIOMIN

A workflow combining culture-dependent and culture-independent approaches using multi-omics techniques was suggested for revolutionary probiotic selection in swine industry.

# Characterization of longitudinal swine gut microbiome using culture dependent and independent approaches

## KEY BIOLOGICAL AND ECOLOGICAL QUESTIONS

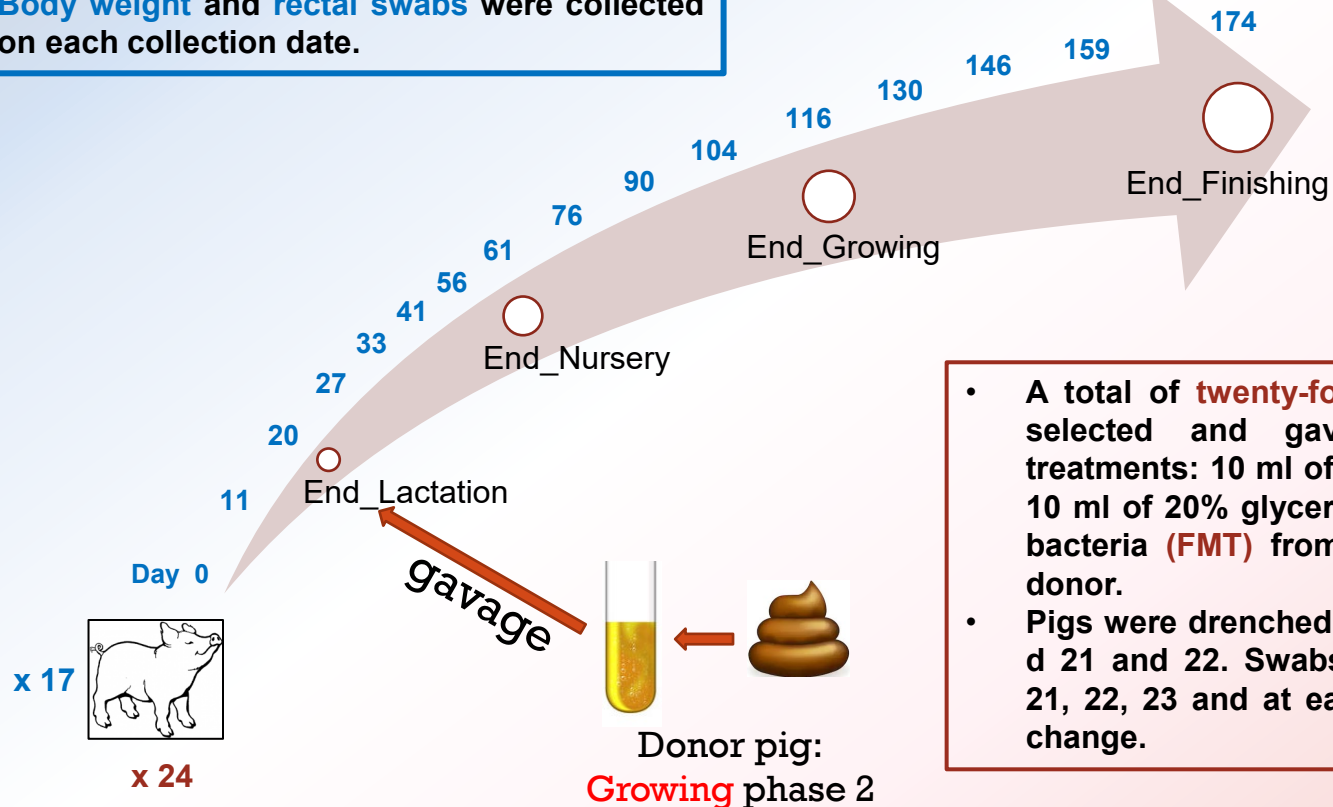

- How does the swine gut microbiome change from birth to market?
- Whether adult pigs' microbiota can colonize in young piglets?
- What are the major drivers shaping the swine gut microbiome?
- Who are the residents and who are passengers?
- Is there a core microbiome?
- Are probiotics stage-related?
- What is the dynamics of pathogens in swine gut?

# Chapter I. Dynamics

## TEST

- A total of **seventeen pigs** (PIC29\*380) born from **three sows** in **parity 2** were raised in University of Arkansas-Division of Agriculture Swine Research Unit in Fayetteville, Arkansas.
- All pigs were fed the **corn, soybean meal** based standard diets.
- **Body weight** and **rectal swabs** were collected on each collection date.

V4 region of 16s rRNA

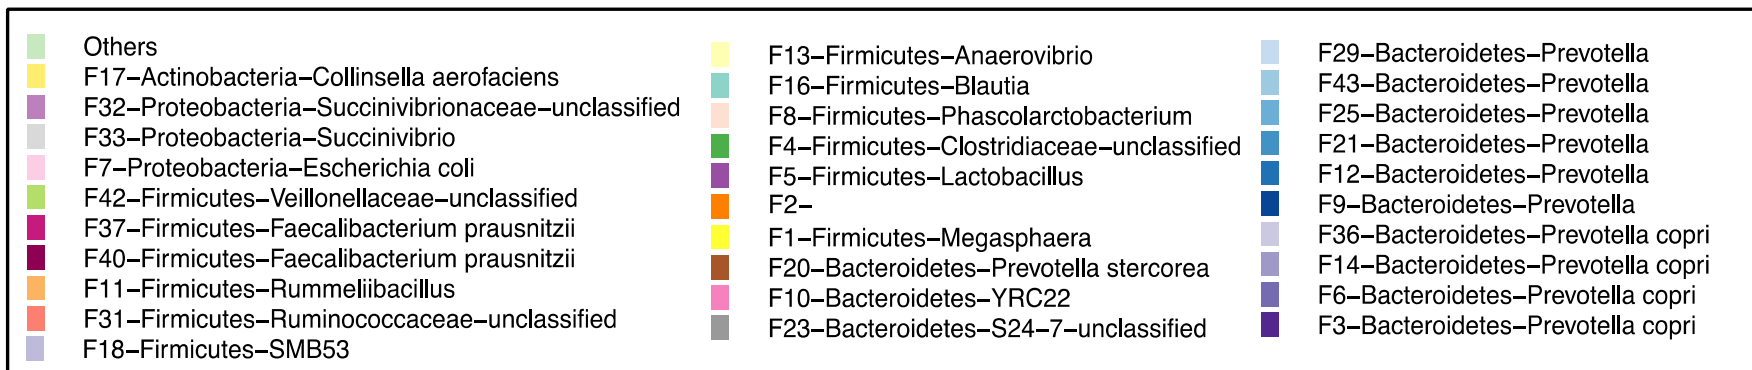

- A total of **twenty-four** weaned pigs were selected and gavaged with one of treatments: 10 ml of 20% glycerol (**Con**) or 10 ml of 20% glycerol with extracted fecal bacteria (**FMT**) from grower phase 2 pig donor.
- Pigs were drenched two consecutive days d 21 and 22. Swabs were collected on d 21, 22, 23 and at each subsequent phase change.

## VALIDATION
